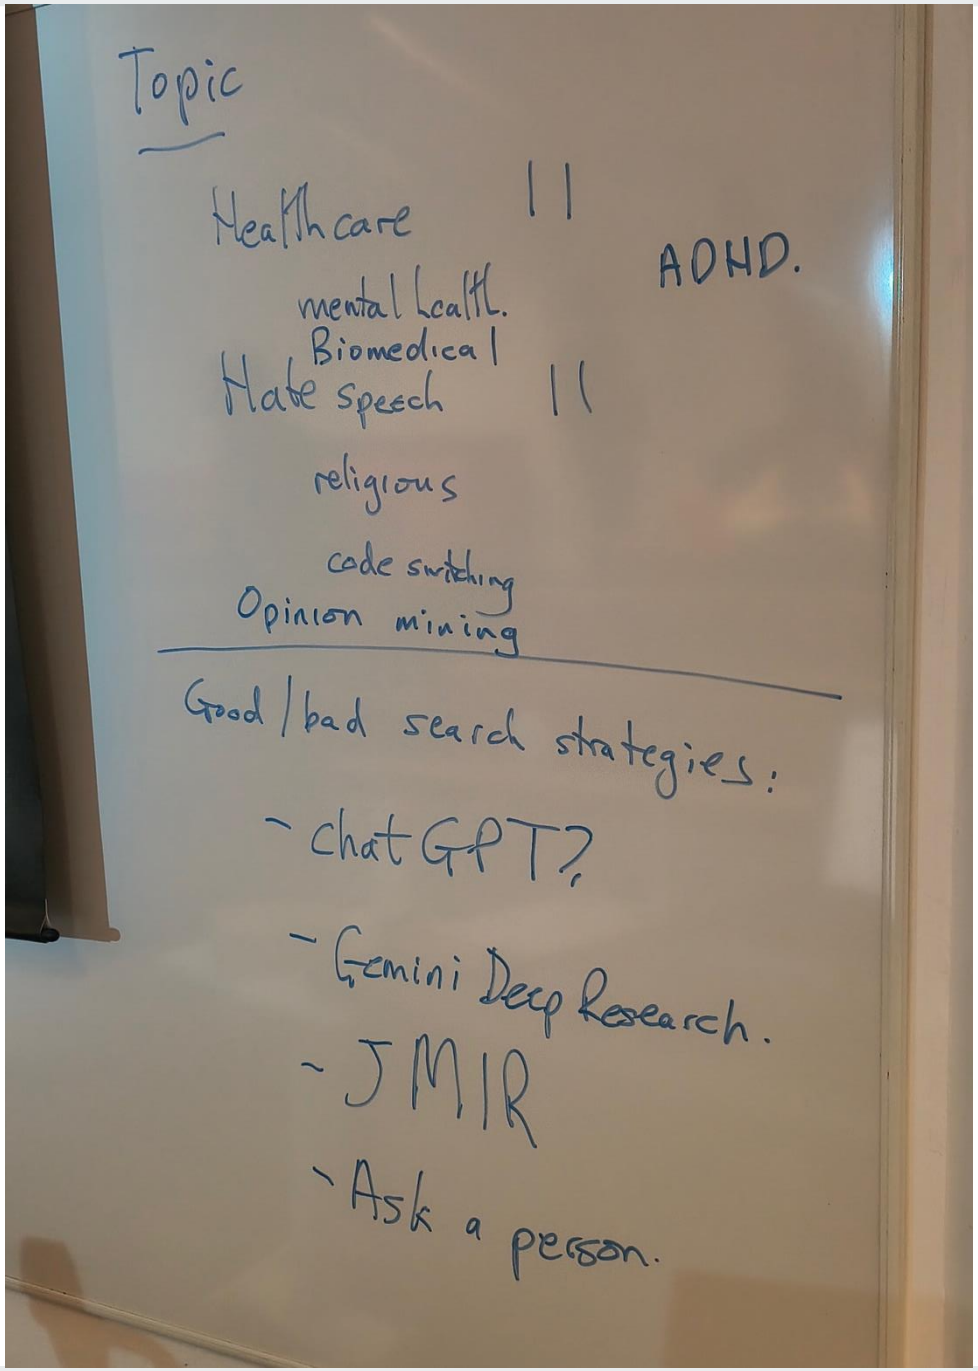
Week 17: Literature Review Whiteboard Photos

SCC453 Natural Language Processing and Language Models

Paul Rayson



Topic
Healthcare
mental health.
Biomedical
ADHD.
Hate speech
religious
code switching
Opinion mining
Good / bad search strategies:
- chat GPT?
- Gemini Deep Research.
- JMIR
- Ask a person.

Lit Review Top Tips:

1. Terminology: e.g. "Hate speech" vs "toxic" vs "offensive language"

2. What data + NLP methods are being used and have they changed over time
   - how good/bad/explainable/reliable are they
   - are there still unsolved problems/limitations?
     - ↳ i.e. languages or dialects missing

3. Is data + code available?
   - can the results still be replicated?

4. For each paper, are you reading just the title, abstract or the whole paper?
   - conclusion should have limitations + future work

5. Any topics that NLP can't help with yet?
